# **types of relationships**

**Question 16** (4 marks)

Consider the triangle shown.

- (a) Find the value of  $\theta$ , correct to the nearest degree.

2

.....  
.....  
.....  
.....

- (b) Find the value of  $x$ , correct to one decimal place.

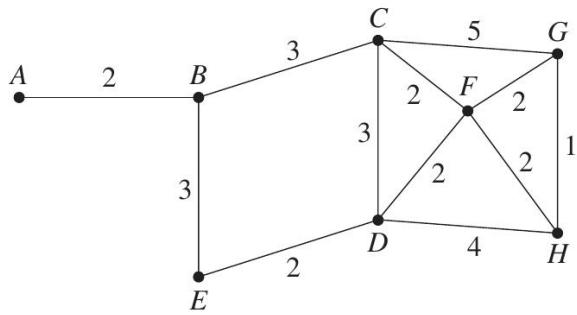

2

.....  
.....  
.....  
.....

Do NOT write in this area.

**Question 18** (4 marks)

The diagram represents a network with weighted edges.

- (a) Draw a minimum spanning tree for this network in the space below and determine its length.

3

Minimum length of spanning tree = .....

Do NOT write in this area.

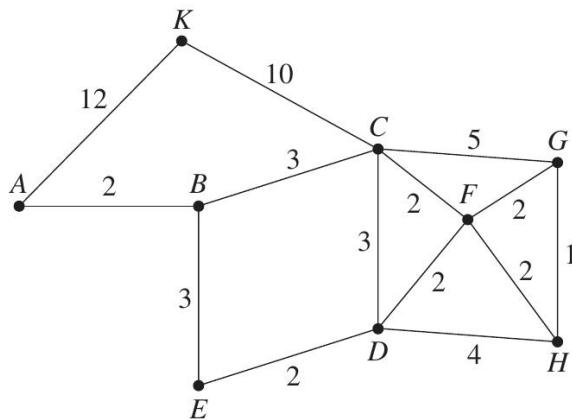

**Question 18 continues on page 13**

## 2020\_hsc q18 (continued)

Question 18 (continued)

- (b) The network is revised by adding another vertex,  $K$ . Edges  $AK$  and  $CK$  have weights of 12 and 10 respectively, as shown.

1

What is the length of the minimum spanning tree for this revised network?

.....  
.....  
.....

Do NOT write in this area.

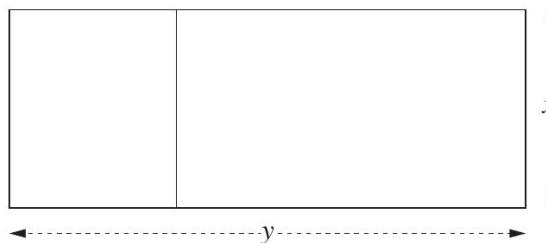

**End of Question 18**

**Please turn over**

**Question 19** (4 marks)

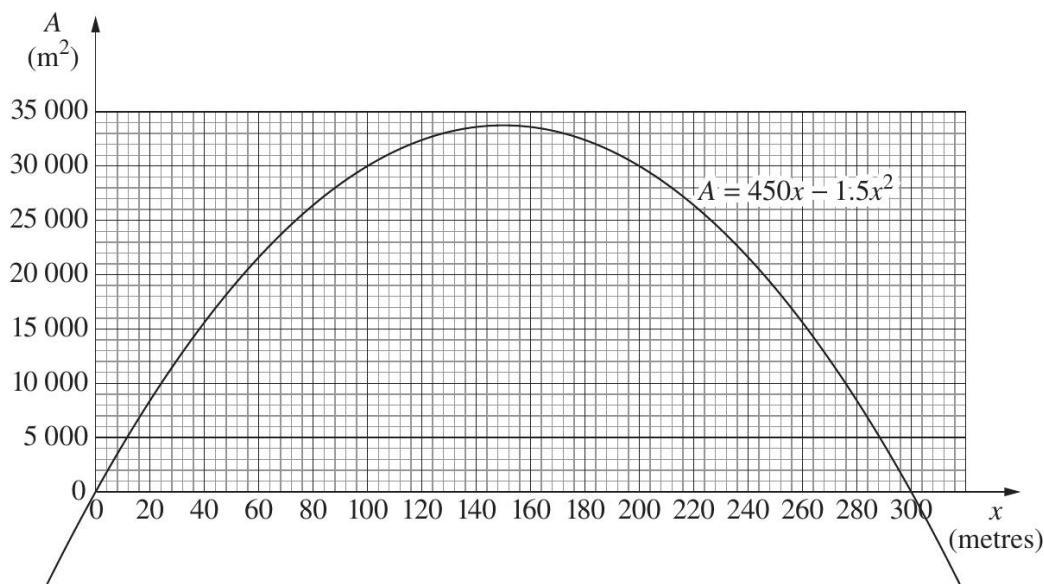

A fence is to be built around the outside of a rectangular paddock. An internal fence is also to be built.

The side lengths of the paddock are  $x$  metres and  $y$  metres, as shown in the diagram.

A total of 900 metres of fencing is to be used. Therefore  $3x + 2y = 900$ .

The area,  $A$ , in square metres, of the rectangular paddock is given by  $A = 450x - 1.5x^2$ .  
The graph of this equation is shown.

- (a) If the area of the paddock is  $30\ 000\ m^2$ , what is the largest possible value of  $x$ ? 1

.....  
.....

**Question 19 continues on page 15**

## 2020\_hsc\_q19 (continued)

Question 19 (continued)

- (b) Find the values of  $x$  and  $y$  so that the area of the paddock is as large as possible.

2

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

- (c) Using your values from part (b), find the largest possible area of the paddock.

1

.....  
.....  
.....  
.....  
.....

**End of Question 19**

Do NOT write in this area.

**Please turn over**

## 2020\_hsc q24

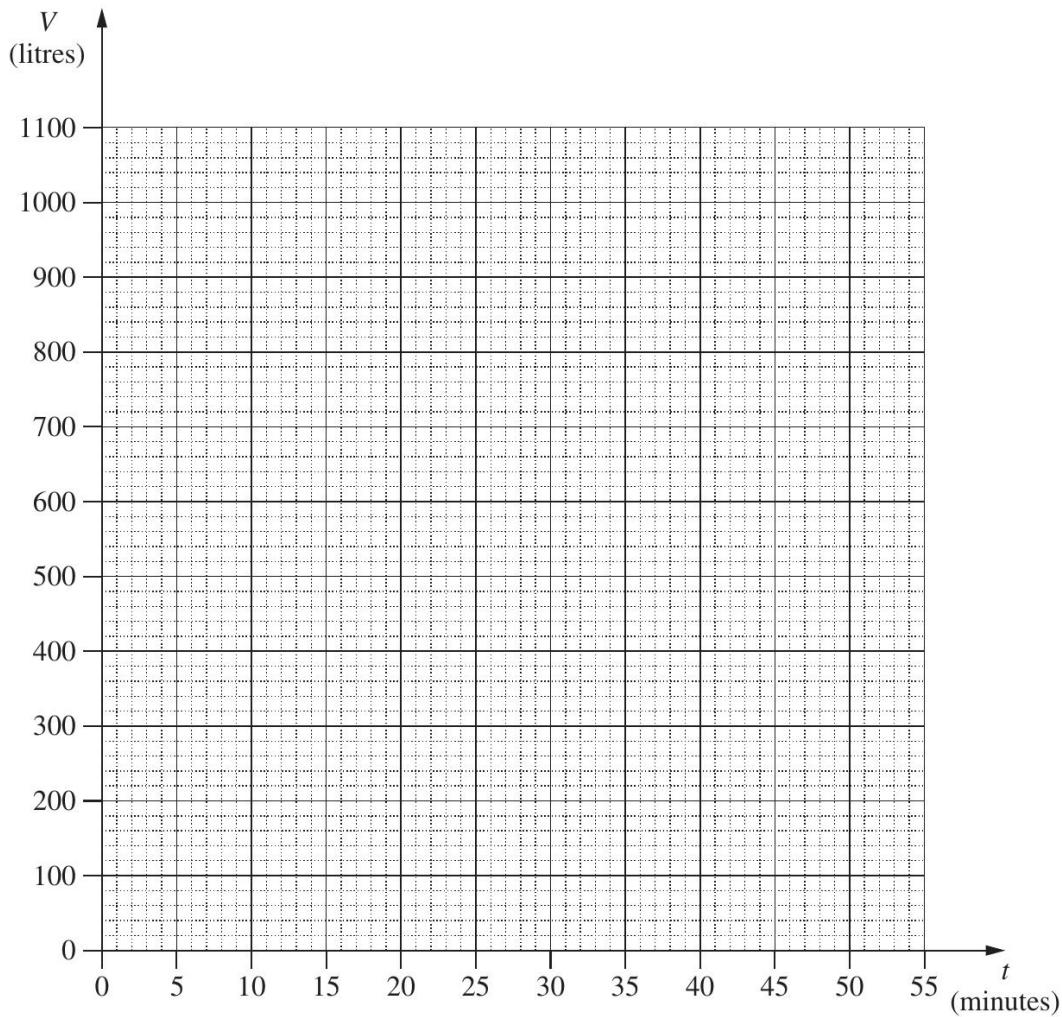

### Question 24 (4 marks)

There are two tanks on a property, Tank A and Tank B. Initially, Tank A holds 1000 litres of water and Tank B is empty.

- (a) Tank A begins to lose water at a constant rate of 20 litres per minute. The volume of water in Tank A is modelled by  $V = 1000 - 20t$  where  $V$  is the volume in litres and  $t$  is the time in minutes from when the tank begins to lose water.

1

On the grid below, draw the graph of this model and label it as Tank A.

Do NOT write in this area.

Question 24 continues on page 21

## 2020\_hsc q24 (continued)

Question 24 (continued)

- (b) Tank  $B$  remains empty until  $t = 15$  when water is added to it at a constant rate of 30 litres per minute.

2

By drawing a line on the grid on the previous page, or otherwise, find the value of  $t$  when the two tanks contain the same volume of water.

.....  
.....  
.....  
.....  
.....  
.....  
.....

- (c) Using the graphs drawn, or otherwise, find the value of  $t$  (where  $t > 0$ ) when the total volume of water in the two tanks is 1000 litres.

1

.....  
.....  
.....  
.....  
.....

**End of Question 24**

Do NOT write in this area.

## 2020\_hsc q26

### Question 26 (5 marks)

The preparation of a meal requires the completion of all ten activities *A* to *J*. The network diagram shows the activities and their completion times in minutes.

- (a) What is the minimum time needed to prepare the meal?

1

.....  
.....  
.....

- (b) List the activities which make up the critical path for this network.

2

.....  
.....  
.....  
.....

- (c) Complete the table below, showing the earliest start time and float time for activities *A* and *G*.

2

Activity	Earliest start time (minutes)	Float time (minutes)
<i>A</i>		
<i>G</i>		

**Question 28** (4 marks)

Consider the following dataset.

4

1 5 9 10 15

Suppose a new value,  $x$ , is added to this dataset, giving the following.

1      5      9      10      15       $x$

It is known that  $x$  is greater than 15. It is also known that the difference between the means of the two datasets is equal to ten times the difference between the medians of the two datasets.

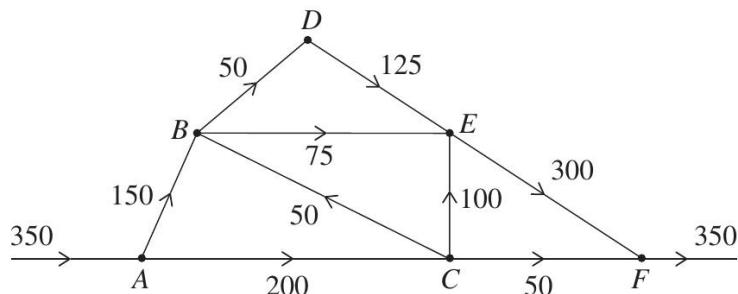

Calculate the value of  $x$ .

**Do NOT write in this area.**

## 2020\_hsc q30

### Question 30 (3 marks)

The network diagram shows a series of water channels and ponds in a garden. The vertices  $A$ ,  $B$ ,  $C$ ,  $D$ ,  $E$  and  $F$  represent six ponds. The edges represent the water channels which connect the ponds. The numbers on the edges indicate the maximum capacity of the channels.

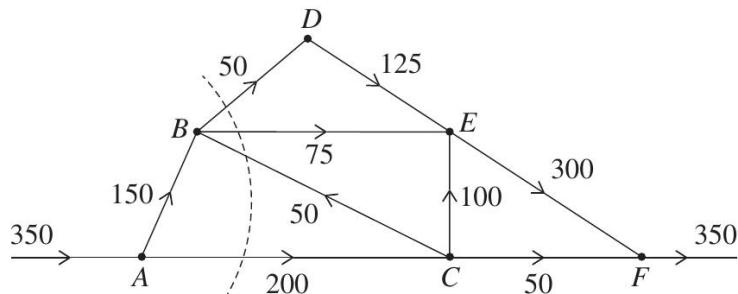

- (a) Determine the maximum flow of the network.

2

.....  
.....

- (b) A cut is added to the network, as shown.

1

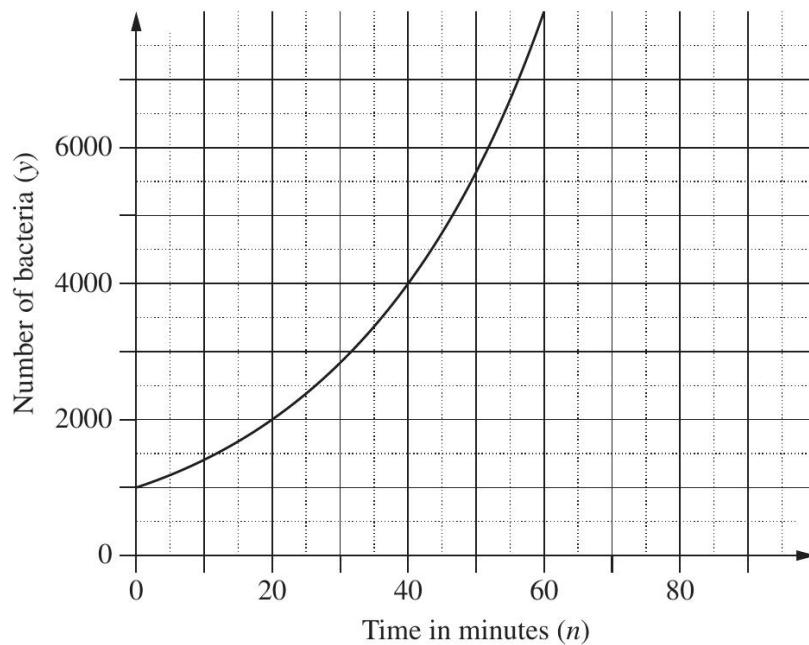

Is the cut shown a minimum cut? Give a reason for your answer.

.....  
.....  
.....  
.....

**Question 33** (3 marks)

The graph shows the number of bacteria,  $y$ , at time  $n$  minutes. Initially (when  $n = 0$ ) the number of bacteria is 1000.

- (a) Find the number of bacteria at 40 minutes.

1

.....  
.....

**Question 33 continues on page 35**

## 2020\_hsc q33 (continued)

Question 33 (continued)

- (b) The number of bacteria can be modelled by the equation  $y = A \times b^n$ , where  $A$  and  $b$  are constants.

2

Use the guess and check method to find, to two decimal places, an upper and lower estimate for the value of  $b$ . The upper and lower estimates must differ by 0.01.

.....  
.....  
.....  
.....  
.....  
.....  
.....

**End of Question 33**

Do NOT write in this area.

**Please turn over**

**Question 34 (4 marks)**

Tina inherits \$60 000 and invests it in an account earning interest at a rate of 0.5% per month. Each month, immediately after the interest has been paid, Tina withdraws \$800.

The amount in the account immediately after the  $n$ th withdrawal can be determined using the recurrence relation

$$A_n = A_{n-1}(1.005) - 800,$$

where  $n = 1, 2, 3, \dots$  and  $A_0 = 60\,000$ .

- (a) Use the recurrence relation to find the amount of money in the account immediately after the third withdrawal.

2

**Do NOT write in this area**

**Question 34 continues on page 37**

2020\_hsc q34 (continued)

**Question 34 (continued)**

- (b) Calculate the amount of interest earned in the first three months.

2

## 2020\_hsc q35

### Question 35 (7 marks)

The Intelligence Quotient (IQ) scores for adults in City *A* are normally distributed with a mean of 108 and a standard deviation of 10.

The IQ scores for adults in City *B* are normally distributed with a mean of 112 and a standard deviation of 16.

- (a) Yin is an adult who lives in City *A* and has an IQ score of 128. 2

What percentage of the adults in this city have an IQ score higher than Yin's?

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

- (b) There are 1 000 000 adults living in City *B*. 2

Calculate the number of adults in City *B* that would be expected to have an IQ score lower than Yin's.

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

Question 35 continues on page 39

2020\_hsc q35 (continued)

**Question 35 (continued)**

- (c) Simon, an adult who lives in City  $A$ , moves to City  $B$ . The  $z$ -score corresponding to his IQ score in City  $A$  is the same as the  $z$ -score corresponding to his IQ score in City  $B$ .

3

By first forming an equation, calculate Simon's IQ score. Give your answer correct to one decimal place.

End of Question 35

**Do NOT write in this area.**

## 2020\_kambala q18

### Question 18 (4 marks)

The length of the Sydney Harbour Bridge has been measured as 1149 m, correct to the nearest metre.

- (a) What is the precision of this measurement?

1

.....

- (b) What is the absolute error of this measurement?

1

.....

.....

- (c) Calculate the percentage error for this measurement?

2

Give your answer correct to 2 decimal places.

.....

.....

.....

.....

.....

## 2020\_kambala q21

Ellie borrowed \$17 450 to complete payment for a used car. Reducible interest on the loan was charged at 4.2% p.a., with repayments of \$395.57 due at the end of every month. The table below sets out her monthly repayment schedule for the first four months.

Month	Amount owing at start of month	Interest charged at end of month	Repayment	Amount owing at end of month
1	$A$	61.08	395.57	17 115.51
2	17 115.51	$X$	395.57	16 779.84
3	16 779.84	58.73	395.57	16 443.00
4	16 443.00	57.55	395.57	$B$

- (a) Some values in the table are missing. Write down the values for  $A$  and  $B$ .

2

.....  
.....  
.....  
.....

- (b) Calculate the interest ( $X$ ) charged on the loan at the end of the second month.

2

.....  
.....  
.....  
.....

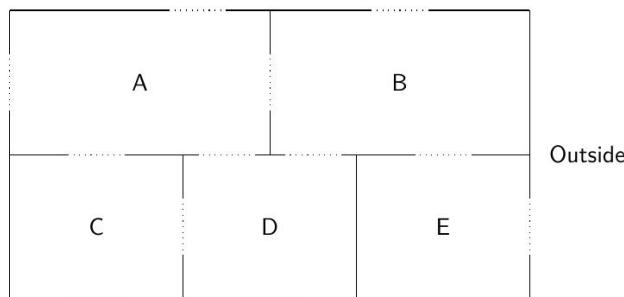

- (c) Ellie repays this loan after 4 years. What is the total amount that she spends on the loan? 1

.....  
.....  
.....  
.....

## 2020\_kambala q28

### Question 28 (4 marks)

The diagram below shows a floor plan of a new building with five rooms. Each room has a number of doors to another room or to the outside.

- (a) Complete the matrix below, indicating the number of possible doors between each room and an adjacent room or the outside ( $O$ ). 2

	$A$	$B$	$C$	$D$	$E$	$O$
$A$	-					
$B$		-				
$C$			-			
$D$				-		
$E$					-	
$O$						-

- (b) Bob the builder needs to inspect each door. He wants to start outside the building, 2 then check every door, and finish outside the building again, passing through each doorway once and once only. Is this possible? Use your answer to (a) or the floor plan to justify your answer.

.....  
.....  
.....  
.....

## 2020\_kambala q29

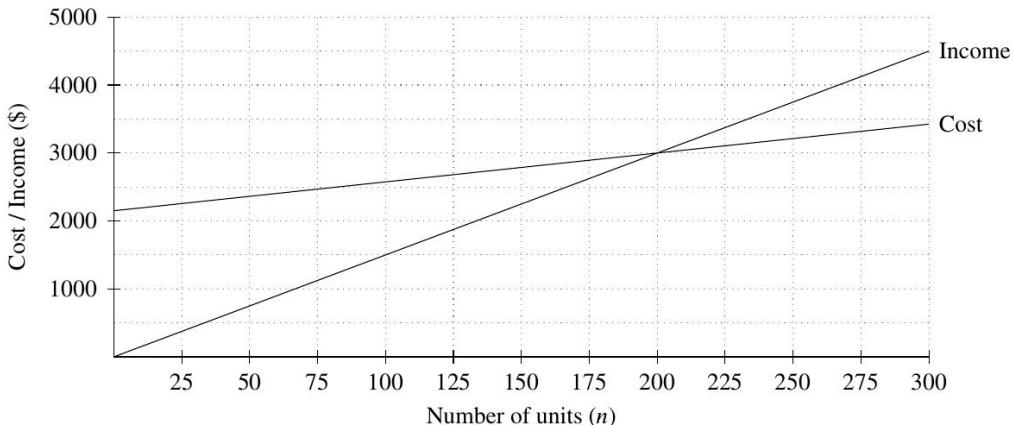

### Question 29 (5 marks)

The cost ( $C$ ) and income ( $I$ ) equations for the Super Product Company are given below.

Cost:  $C = 2150 + \frac{17n}{4}$

Income:  $I = 15n$

where the value is measured in dollars and  $n$  is the number of units produced or sold.

- (a) How many units need to be sold for the company to break even?

1

.....  
.....

- (b) What are the costs for the company when the break-even point has been reached?

1

.....  
.....  
.....  
.....

- (c) What is the gradient of the cost line, and what does that value represent in the context of this question?

1

.....  
.....  
.....

- (d) Calculate the profit made by the company when 360 units are produced and sold.

2

.....  
.....  
.....  
.....  
.....  
.....

## 2020\_kambala q31

### Question 31 (4 marks)

A petroleum company offered share packages to its shareholders. No brokerage fees or stamp duty was charged. Shares were offered according to the following schedule.

Number of shares (n)	Cost of shares (\$C)
55	1485
111	2997
148	3996
185	4995

- (a) The cost ( $C$ ) of purchasing shares varies directly with the number of shares ( $n$ ) purchased. **2**  
Find an equation in the form  $C = kn$  that relates  $n$  to  $C$ .

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

- (b) Explain the significance of  $k$ , the constant of proportionality, in your equation in part (a). **1**

.....  
.....  
.....

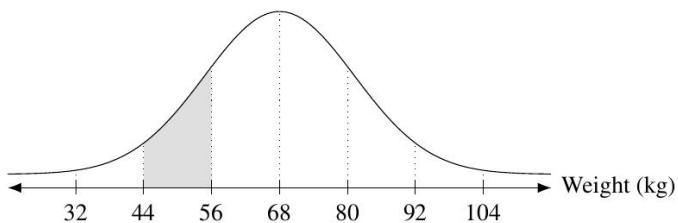

- (c) How much would it cost to purchase 800 shares under this plan? **1**

.....  
.....  
.....  
.....

## 2020\_kambala q33

### Question 33 (5 marks)

The diagram below shows the spread of weights, in kilograms, of 800 students. The spread is normally distributed and has a mean of 68 kg.

- (a) Show that the standard deviation of the distribution is 12.

1

.....  
.....

- (b) How many students have a weight within the shaded region?

2

.....  
.....  
.....  
.....  
.....  
.....  
.....

- (c) Elizabeth is part of the group of students. Her weight is 62 kg. What is her corresponding z-score?

1

.....  
.....  
.....  
.....

- (d) A student from the group is selected at random. What is the probability that they have a weight less than 80 kg?

1

.....  
.....  
.....  
.....

## 2020\_kambala q34

### Question 34 (4 marks)

Alex purchased a new car for \$15 000. After 3 years, using the straight line method of depreciation, the salvage value of the car is \$9213.

- (a) Find the annual amount of depreciation,  $D$ , according to the straight line method of depreciation. 2

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

- (b) If Alex decided to use the declining balance method instead, what would be the annual rate of depreciation,  $r$ , if the car was worth the same amount after 3 years? 2

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

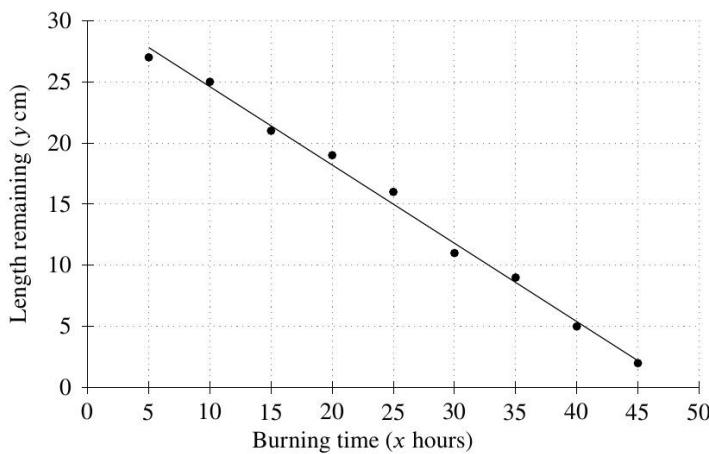

## 2020\_kambala q36

### Question 36 (5 marks)

Peter, a church warden, decides to investigate the lifetime of a particular brand of wax candle. Each candle is 30 cm in length. From a box containing a large number of wax candles, he selects one candle at random. He lights the candle and, after it has burned continuously for  $x$  hours, he records its remaining length,  $y$  cm, to the nearest centimetre. His results are shown in the table below.

Burning time ( $x$ hours)	5	10	15	20	25	30	35	40	45
Length remaining ( $y$ cm)	27	25	21	19	16	11	9	5	2

The points from the table are plotted in the scatterplot below and the least-squares line of best fit has been added to the scatterplot.

- (a) The equation of the least-squares line of best fit can be written in the form  $y = c - mx$ . 2  
Use your calculator to find the values of  $c$  and  $m$ .

.....  
.....  
.....

- (b) What does your value of  $m$  represent in the context of this question? 1

.....  
.....  
.....

- (c) It is claimed by the candle manufacturer that the total length of time that such candles are likely to burn for is at least 50 hours. Comment on this claim, using appropriate calculations and reasoning to justify your answer. 2

.....  
.....  
.....

## 2020\_kambala q37

### Question 37 (4 marks)

The network below shows the routes along corridors from two arrival gates to the passport control area,  $P$ , in an airport. The number on each edge represents the maximum number of passengers that can travel along a particular corridor in one minute.

- (a) Which vertices represent the two arrival gates?

1

.....  
.....

- (b) Find the value of the cut shown in the diagram above.

1

.....  
.....

- (c) On a particular day, there is an obstruction at  $F$  so corridors in and out of that intersection cannot be used. The diagram below shows the available network for that day.

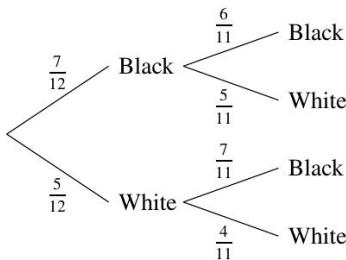

Calculate the maximum flow of passengers in one minute through this network while this obstruction is occurring.

.....  
.....  
.....  
.....  
.....  
.....  
.....

## 2020\_kambala q38

### Question 38 (5 marks)

Georgie's sock drawer contains 7 black socks and 5 white socks. She selects two socks at random from the drawer. A tree diagram for this situation is shown below.

- (a) Calculate the probability that the socks Georgie selects are the same colour.

2

.....  
.....  
.....  
.....  
.....  
.....  
.....

- (b) Georgie washes and dries her socks and puts them back in the drawer. The following week she adds 8 more socks to the drawer. All of the additional socks are black or white. After this has been done, Georgie selects a sock at random from the drawer. The probability that this sock is black is  $\frac{3}{5}$ . How many black socks and white socks were added to the drawer?

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

## 2020\_hsc q36

### Question 36 (5 marks)

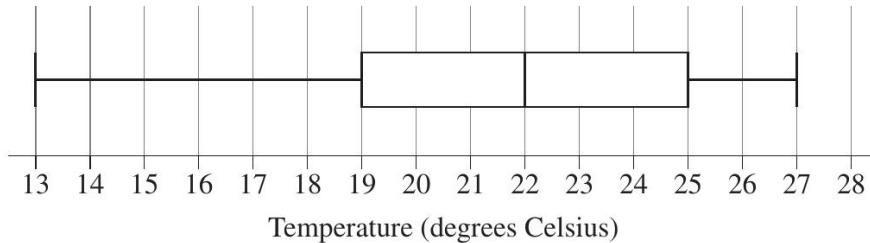

A cricket is an insect. The male cricket produces a chirping sound.

5

A scientist wants to explore the relationship between the temperature in degrees Celsius and the number of cricket chirps heard in a 15-second time interval.

Once a day for 20 days, the scientist collects data. Based on the 20 data points, the scientist provides the information below.

- A box-plot of the temperature data is shown.

- The mean temperature in the dataset is  $0.525^{\circ}\text{C}$  below the median temperature in the dataset.
- A total of 684 chirps was counted when collecting the 20 data points.

The scientist fits a least-squares regression line using the data  $(x, y)$ , where  $x$  is the temperature in degrees Celsius and  $y$  is the number of chirps heard in a 15-second time interval. The equation of this line is

$$y = -10.6063 + bx,$$

where  $b$  is the slope of the regression line.

The least-squares regression line passes through the point  $(\bar{x}, \bar{y})$  where  $\bar{x}$  is the sample mean of the temperature data and  $\bar{y}$  is the sample mean of the chirp data.

**Question 36 continues on page 41**

2020\_hsc q36 (continued)

**Question 36 (continued)**

Calculate the number of chirps expected in a 15-second interval when the temperature is 19° Celsius. Give your answer correct to the nearest whole number.

## 2020\_hsc q26

### Question 26 (5 marks)

The preparation of a meal requires the completion of all ten activities  $A$  to  $J$ . The network diagram shows the activities and their completion times in minutes.

- (a) What is the minimum time needed to prepare the meal?

1

.....  
.....  
.....

- (b) List the activities which make up the critical path for this network.

2

.....  
.....  
.....  
.....

- (c) Complete the table below, showing the earliest start time and float time for activities  $A$  and  $G$ .

2

Activity	Earliest start time (minutes)	Float time (minutes)
$A$		
$G$		

**Question 29** (3 marks)

Jana owns a share portfolio. Details of her share portfolio at 30 June 2020 are given in the table.

<i>Company name</i>	<i>Number of shares in Jana's portfolio</i>	<i>Dividend yield (per annum)</i>	<i>Market price per share</i>
<i>ABC</i>	200	6.0%	\$5.50
<i>XYZ</i>	?	4.0%	\$6.00

Jana received a total annual dividend of \$149.52 from her share portfolio.

Calculate the number of shares Jana has in company XYZ on 30 June 2020.

**Do NOT write in this area**

## 2020\_hsc q36

### Question 36 (5 marks)

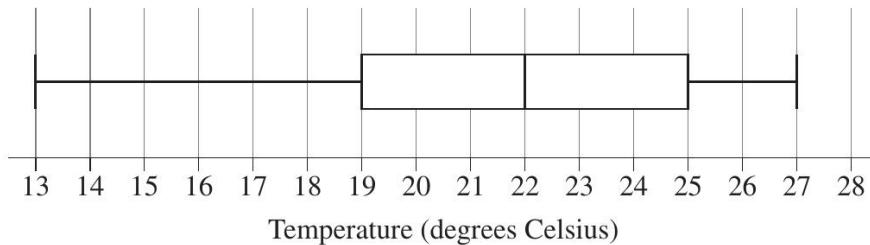

A cricket is an insect. The male cricket produces a chirping sound.

5

A scientist wants to explore the relationship between the temperature in degrees Celsius and the number of cricket chirps heard in a 15-second time interval.

Once a day for 20 days, the scientist collects data. Based on the 20 data points, the scientist provides the information below.

- A box-plot of the temperature data is shown.

- The mean temperature in the dataset is  $0.525^{\circ}\text{C}$  below the median temperature in the dataset.
- A total of 684 chirps was counted when collecting the 20 data points.

The scientist fits a least-squares regression line using the data  $(x, y)$ , where  $x$  is the temperature in degrees Celsius and  $y$  is the number of chirps heard in a 15-second time interval. The equation of this line is

$$y = -10.6063 + bx,$$

where  $b$  is the slope of the regression line.

The least-squares regression line passes through the point  $(\bar{x}, \bar{y})$  where  $\bar{x}$  is the sample mean of the temperature data and  $\bar{y}$  is the sample mean of the chirp data.

Do NOT write in this area.

**Question 36 continues on page 41**

2020\_hsc q36 (continued)

**Question 36 (continued)**

Calculate the number of chirps expected in a 15-second interval when the temperature is 19° Celsius. Give your answer correct to the nearest whole number.

**Question 37 (3 marks)**

Wilma deposited a lump sum into a new bank account which earns 2% per annum compound interest.

3

Present value interest factors for an annuity of \$1 for various interest rates ( $r$ ) and numbers of periods ( $N$ ) are given in the table.

## Table of present value interest factors

$r$	Interest rate per period as a decimal			
$N$	0.01	0.015	0.02	0.025
10	9.471	9.222	8.983	8.752
20	18.046	17.169	16.351	15.589
30	25.808	24.016	22.396	20.930

Wilma was able to make the following withdrawals from this account.

- \$1000 at the end of each year for twenty years (starting one year after the account is opened)
  - \$3000 each year for ten years starting 21 years after the account is opened.

Calculate the minimum lump sum Wilma must have deposited when she opened the new account.

2020\_kambala q23

**Question 23** (4 marks)

The formula below can be used to estimate the blood alcohol content (*BAC*) for females.

$$BAC = \frac{10N - 7.5H}{5.5M}$$

4

where  $N$  is the number of standard drinks consumed,  $H$  is the number of hours of drinking, and  $M$  is the person's weight in kilograms.

The number of hours required for a person to reach a zero *BAC* after they stop drinking alcohol is given by the formula:

$$\text{Time} = \frac{BAC}{0.015}$$

The number of standard drinks in a typical serving is shown in the table below.

	Number of Standard Drinks
Beer (1 glass)	1.1
Spirits (1 shot)	1
Wine (1 glass)	1.2

Lucy was out on Saturday night celebrating her team's win. The celebrations started at 8 pm and continued until the team's 11:30 pm curfew. During this time, she consumed 5 glasses of wine and 2 shots of spirits. She then stopped drinking alcohol. Using the information and formulas above, and the fact that Lucy weighs 72 kg, determine what day and time her BAC should reach zero.

The preparation of a meal requires the completion of all ten activities *A* to *J*. The network diagram shows the activities and their completion times in minutes.

- (a) What is the minimum time needed to prepare the meal?

1

.....  
.....  
.....

- (b) List the activities which make up the critical path for this network.

2

.....  
.....  
.....  
.....

- (c) Complete the table below, showing the earliest start time and float time for activities *A* and *G*.

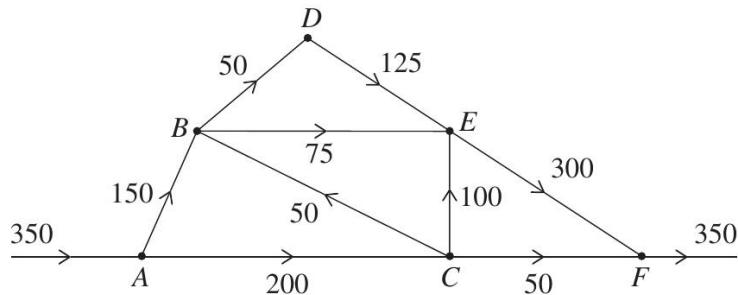

2

Activity	Earliest start time (minutes)	Float time (minutes)
<i>A</i>		
<i>G</i>		

**Question 27** (5 marks)

The shaded region on the diagram represents a garden. The scale is 1 cm = 5 m.

- (a) Use two applications of the trapezoidal rule to calculate the approximate area of the garden.

3

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

- (b) Should the answer to part (a) be more than, equal to or less than the actual area of the garden? Referring to the diagram above, briefly explain your answer.

**Questions 16–27 are worth 44 marks in total**

**Question 28** (4 marks)

Consider the following dataset.

4

1 5 9 10 15

Suppose a new value,  $x$ , is added to this dataset, giving the following.

1      5      9      10      15       $x$

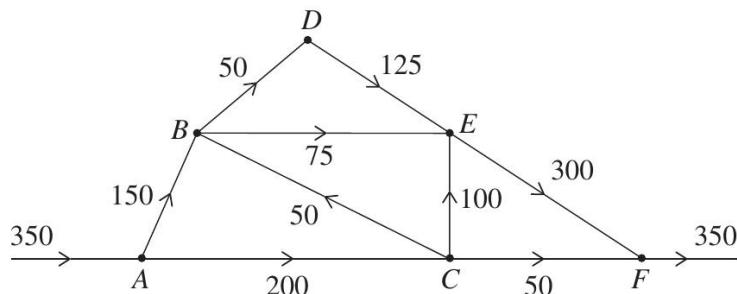

It is known that  $x$  is greater than 15. It is also known that the difference between the means of the two datasets is equal to ten times the difference between the medians of the two datasets.

Calculate the value of  $x$ .

**Do NOT write in this area.**

**Question 30** (3 marks)

The network diagram shows a series of water channels and ponds in a garden. The vertices  $A$ ,  $B$ ,  $C$ ,  $D$ ,  $E$  and  $F$  represent six ponds. The edges represent the water channels which connect the ponds. The numbers on the edges indicate the maximum capacity of the channels.

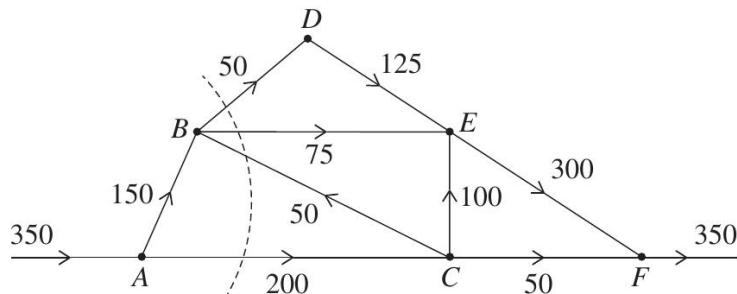

- (a) Determine the maximum flow of the network.

2

.....  
.....

- (b) A cut is added to the network, as shown.

1

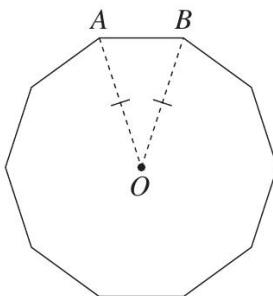

Is the cut shown a minimum cut? Give a reason for your answer.

.....  
.....  
.....  
.....

**Question 32 (4 marks)**

The diagram shows a regular decagon (ten-sided shape with all sides equal and all interior angles equal). The decagon has centre  $O$ .

4

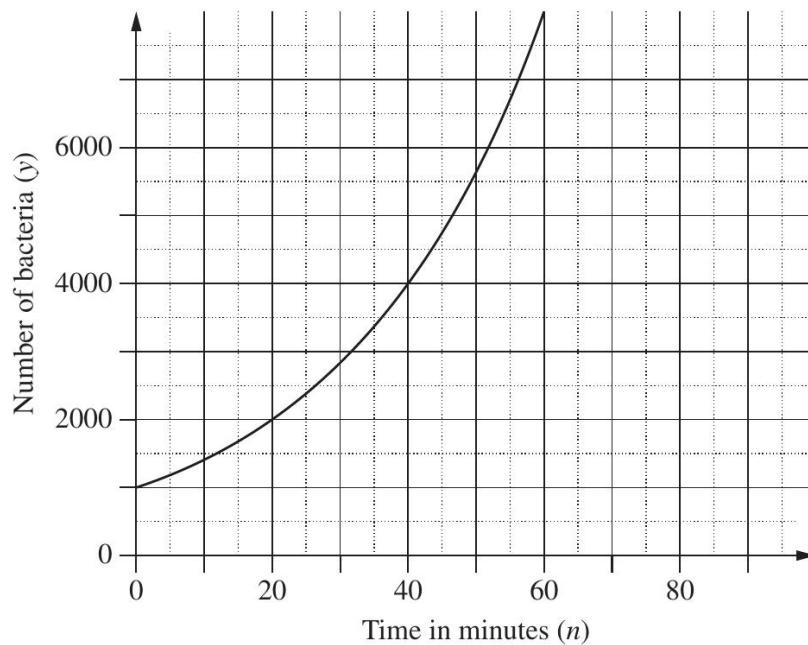

The perimeter of the shape is 80 cm.

By considering triangle  $OAB$ , calculate the area of the ten-sided shape. Give your answer in square centimetres correct to one decimal place.

**Do NOT write in this area.**

**Question 33** (3 marks)

The graph shows the number of bacteria,  $y$ , at time  $n$  minutes. Initially (when  $n = 0$ ) the number of bacteria is 1000.

- (a) Find the number of bacteria at 40 minutes.

1

.....  
.....

**Question 33 continues on page 35**

## 2020\_hsc q33 (continued)

Question 33 (continued)

- (b) The number of bacteria can be modelled by the equation  $y = A \times b^n$ , where  $A$  and  $b$  are constants.

2

Use the guess and check method to find, to two decimal places, an upper and lower estimate for the value of  $b$ . The upper and lower estimates must differ by 0.01.

**Question 34 (4 marks)**

Tina inherits \$60 000 and invests it in an account earning interest at a rate of 0.5% per month. Each month, immediately after the interest has been paid, Tina withdraws \$800.

The amount in the account immediately after the  $n$ th withdrawal can be determined using the recurrence relation

$$A_n = A_{n-1}(1.005) - 800,$$

where  $n = 1, 2, 3, \dots$  and  $A_0 = 60\,000$ .

- (a) Use the recurrence relation to find the amount of money in the account immediately after the third withdrawal.

2

## 2020\_hsc q36

### Question 36 (5 marks)

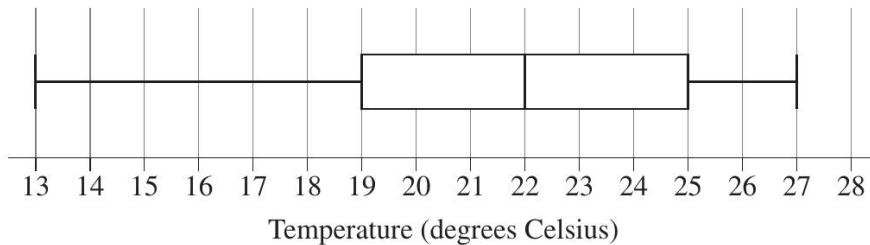

A cricket is an insect. The male cricket produces a chirping sound.

5

A scientist wants to explore the relationship between the temperature in degrees Celsius and the number of cricket chirps heard in a 15-second time interval.

Once a day for 20 days, the scientist collects data. Based on the 20 data points, the scientist provides the information below.

- A box-plot of the temperature data is shown.

- The mean temperature in the dataset is  $0.525^{\circ}\text{C}$  below the median temperature in the dataset.
- A total of 684 chirps was counted when collecting the 20 data points.

The scientist fits a least-squares regression line using the data  $(x, y)$ , where  $x$  is the temperature in degrees Celsius and  $y$  is the number of chirps heard in a 15-second time interval. The equation of this line is

$$y = -10.6063 + bx,$$

where  $b$  is the slope of the regression line.

The least-squares regression line passes through the point  $(\bar{x}, \bar{y})$  where  $\bar{x}$  is the sample mean of the temperature data and  $\bar{y}$  is the sample mean of the chirp data.

**Question 37 (3 marks)**

Wilma deposited a lump sum into a new bank account which earns 2% per annum compound interest.

3

Present value interest factors for an annuity of \$1 for various interest rates ( $r$ ) and numbers of periods ( $N$ ) are given in the table.

## Table of present value interest factors

N	r	Interest rate per period as a decimal			
		0.01	0.015	0.02	0.025
10	9.471	9.222	8.983	8.752	
20	18.046	17.169	16.351	15.589	
30	25.808	24.016	22.396	20.930	

Wilma was able to make the following withdrawals from this account.

- \$1000 at the end of each year for twenty years (starting one year after the account is opened)
  - \$3000 each year for ten years starting 21 years after the account is opened.

Calculate the minimum lump sum Wilma must have deposited when she opened the new account.

## 2020\_kambala q30

### Question 30 (2 marks)

Sophie opens an investment account on the day of her 18th birthday. She decides to deposit \$120 at the end of every month until she reaches her 25th birthday. At this time, Sophie intends to withdraw the money and use it as a deposit for a new car. The financial institution where the account is held pays interest at 6% p.a., compounded monthly. How much will Sophie be able to use as a deposit for a new car? 2

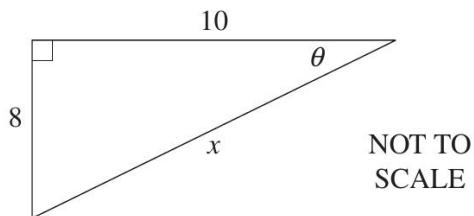

#### Future value of an Annuity of \$1

Number of Periods	Interest rate per period				
	0.25%	0.3%	0.5%	0.75%	1%
6	6.04	6.05	6.08	6.11	6.15
7	7.05	7.06	7.11	7.16	7.21
